

Eastern Reliability's Enclosure Display Stand allows you to mount your display unit close to your tank in a more convenient location. This is a standalone unit that's anchored down to concrete or asphalt surface so your meter display enclosure is mounted where you want it to be.

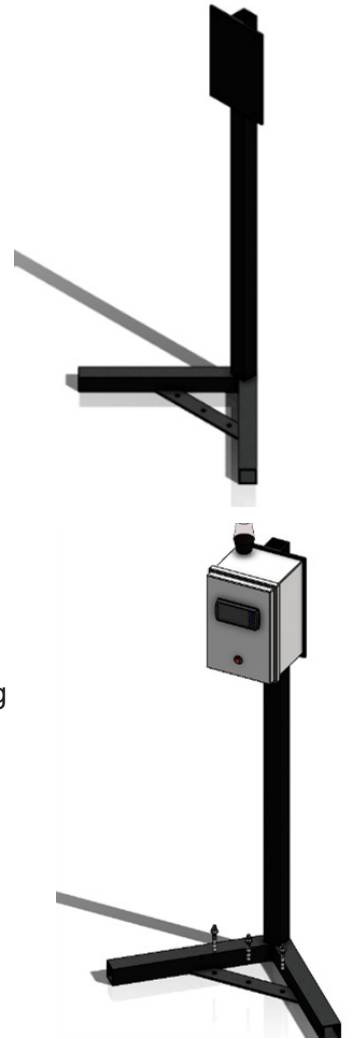

Product Description

ER-ULTDS:

- Made with 2" x 2" x 3/16" Steel Tube Stock.
- Mounting plate is 1/2" thick steel with through holes for mounting the Universal Display Panel (P/N: ER-ULT).
- The anchor plate is 1/4" thick steel with three 1/2" through holes for securing stand onto surface.
- The stand is finished with an epoxy coating to protect the steel in an outdoor environment from rust or corrosion.

ER-CLMW16 Application:

- This stand allows for an easy mounting location for the display panel if the tank location does not have an accessible mounting area such as a wall.
- The stand must be mounted on a solid even surface (i.e., a concrete pad or parking lot surface). This way when you anchor it down with the appropriate hardware, the anchors have something to grab into without the possibility of loosening over time. (Anchor bolts not included).
- Using this display stand can reduce the amount of wiring needed from the 4-20mA transmitter to the display panel or the power source.

TANKS

- High Density & Cross Linked Polyethylene
- Single & Double Wall
- Filament Wound FRP Tanks
- NBSF and FDA Approved
- Vertical and Horizontal Tanks

EQUIPMENT

- Industrial Mixers
- Chemical Feed Stations
- Plastic Pump Skids
- Tanks and Mixer Stands
- Secondary Containment Basins
- Double Wall Piping

INSTRUMENTATION

- Level Sensors and Controls
- Tanks Heaters and Heat Trace
- Leak Detectors Dosing Pumps
- Temperature Sensors
- Expansion Joints
- Flow Meters

Custom Tank Solutions for Specific Applications
